Methodologies: Object-Oriented Programming, Functional Programming, Responsive Design, Component-Driven Development

EXPERIENCE

NEARBuilders

Remote

Software Developer

Sep 2023 – Present

- **NEAR Builders Gateway** | [Website](#)
 - * Designed and developed a platform with features like a Twitter-inspired activity feed, enabling real-time community updates and interactions.
 - * Implemented project management tools for efficient organization and tracking of projects within the NEAR ecosystem.
 - * Integrated resources such as documentation and profile management, enhancing user engagement and providing essential information centrally.
- **NEAR Catalog** | [Website](#)
 - * Created a website showcasing NEAR blockchain projects, highlighting the innovation and diversity within the NEAR ecosystem.
 - * Focused on a user-friendly interface, allowing users to explore and discover various blockchain projects easily, with detailed descriptions and links.
- **Redacted Event App**
 - * Developing a mobile application for an award ceremony in Bangkok with event-specific functionalities like live directions, wallet integration, and a scan-for-rewards system.
 - * Prioritized a seamless user experience catering to both event participants and organizers, featuring real-time updates and interactive elements.
- **NEAR DevHub** | [Website](#)
 - * Updated the NEAR DevHub's user interface to match new design specifications, achieving pixel-perfect accuracy across all components.
 - * Optimized the frontend codebase for better performance and responsiveness, ensuring a smooth experience across various devices and screen sizes.

AWARDS & ACHIEVEMENTS

ETHDenver BUIDLathon: Awarded 2nd place for building an Events app using NEAR Social Contract at ETHDenver BUIDLathon (April 2023).

PERSONAL PROJECTS

E-Commerce Dashboard | [GitHub](#)

- Full stack dashboard for E-Commerce applications, including Dashboard, Inventory Management, Category Management, Banner Management, and Order Management. Features multi-store setup, user authentication, and API endpoints.

E-Commerce Store | [GitHub](#)

- Frontend for E-Commerce websites created using the E-Commerce Dashboard. Includes Stripe integration, cart, quick view, and filters.

Twitter Clone | [GitHub](#)

- Twitter clone with user authentication, profile management, tweet feed, posting, liking, commenting, and exploring users. Built with MongoDB, Next.js, React.js, and TailwindCSS.
